Education

Indian Institute of Information Technology (IIIT) Vadodara - ICD

Dec 2021 – Aug 2025

Bachelor of Technology in Computer Science & Engineering

CGPA: 8.00

Experience

Sigmoid

Jan 2025 – Present

Associate SDE (July 2025 – Present) — Software Engineer Intern (Jan 2025 – June 2025)

Bengaluru, India

- Contributed **1 year** of comprehensive Product Engineering experience, delivering 7+ enterprise-grade products for clients including Pfizer, Reckitt, and MD Johnson, consistently meeting tight deadlines and quality standards.
- Architected and developed Atlas Companion, a real-time **GenAI chatbot** powered by LLM inferencing with WebSocket integration, supporting multi-modal response types (text, tables, SQL queries, bar/line charts, and popups) with token-level streaming capabilities; completed full-stack implementation in 72 hours using Plotly for data visualization.
- Built Data Product Marketplace, a scalable client management platform with RBAC-enabled onboarding forms, automated lineage graph visualization from data assets to end products, and comprehensive report management for multiple client applications.
- Engineered backend infrastructure for Smart Targets, developing complex approval workflows, creating onboarding scripts to migrate 100-column Excel datasets with zero data loss, and implementing Azure Logic Apps for automated email notifications on API triggers.
- Developed Data Companion **GenAI chatbot** frontend integrating LLM-backed streaming responses, delivering real-time token-by-token progress updates and context-aware next-step recommendations; applied prompt engineering techniques to optimize model output quality for end users.
- Established reusable component libraries and scalable architectural patterns adopted across multiple projects, reducing development time by **40%**; followed Agile development practices with CI/CD pipelines for continuous deployment across distributed, large-scale client systems.

Techplement

June 2024 – July 2024

Full Stack Intern

Remote

- Built Social Media Dashboard integrating Facebook, Instagram, YouTube, and Spotify APIs with real-time data visualization (React.js, Tailwind CSS) and scalable Node.js/MongoDB backend for secure credential storage.

Projects

Crime Prediction and Forecasting | *Python, PyTorch, TensorFlow, Keras, LSTM, Transformers, Prophet*

- Led a team of five to implement an IEEE research paper-based crime prediction model using ensemble ML (Random Forest, XGBoost, AdaBoost, KNN) achieving **93% accuracy**; explored transformer-based architectures for sequence modeling on large-scale temporal datasets.
- Applied deep learning (LSTM, RNN, Facebook Prophet) for time-series crime forecasting; built robust preprocessing pipeline with advanced feature extraction across distributed multi-jurisdiction datasets.

Employee Tracking System | *Node.js, Express.js, MongoDB, Socket.io, Leaflet.js*

- Developed real-time employee tracking system using MERN stack with Leaflet.js for map rendering and Socket.io for live location broadcasts, featuring role-based access control for admins and employees.
- Implemented secure MongoDB/Node.js backend ensuring reliable data storage and fast retrieval; integrated real-time location monitoring with seamless map updates for efficient employee management.

Skills

Languages : C, C++, JavaScript, Python, TypeScript
Web Dev : React.js, Next.js, Node.js, Express.js, NestJS, TailwindCSS, SASS, Socket.io, WebSockets, Prisma, Docker
Databases : MySQL, PostgreSQL, MongoDB
AI / ML : Generative AI, LLM Inferencing, Prompt Engineering, PyTorch, TensorFlow, Transformers, Streaming APIs
Cloud & Tools : Azure (Logic Apps, AI Services), Git, RESTful APIs, CI/CD, Distributed Systems, Plotly, Leaflet.js
Coursework : Software Engineering, Data Structures, Algorithms, Object Oriented Programming, DBMS
